

Bostonian Rules

There have been several versions of Bostonian rules in recent years. As the purpose of the event is to encourage newcomers to the scale and/or duration events the rules set down by Walt Mooney would seem to be the most appropriate.

These are :

Maximum wingspan	16 inches
Maximum wing chord	3 inches
Maximum overall length	14 inches (thrust button to rear extremity)
Minimum weight	14 grams (without rubber)
Maximum prop diameter	6 inches
Capable to rise off ground	At least two wheels
Fuselage must contain a 'box' space of 1.5 x 2.5 x 3.0 inches and must have a transparent front and side windows of at least 1 inch x 1 inch	

In addition the prop must be a commercial one piece plastic prop. It may be cut down to the appropriate diameter but other alterations to the blades should be on one blade only in order to balance the prop. This is to discourage excessive tweaking of the prop by thinning the section etc.

Flights are to be rise off ground with the total airborne time noted. Any number of flights may be made, with the best three totalled for the final score.
